WATER POWERED EMERGENCY BACKUP SUMP PUMP

Using Water to Remove Water! (Uses 1 Gallon to Pump 2 Gallons)

Basepump Ejector

Have you ever lost power to your sump pump?

Do you think about what would happen if your sump pump failed? How about that furnace, hot water tank, or laundry room? What about the rec room, office, or storage area?

If you ever had a sump pump failure, you already know about the mess and damage it can cause. Just an inch or two of water can seriously damage carpets, drywall, and other items. And even if it is covered by insurance, it is you that has to deal with it all. The cleanup, the removal, the contractors, the deductibles, the insurance hassles.

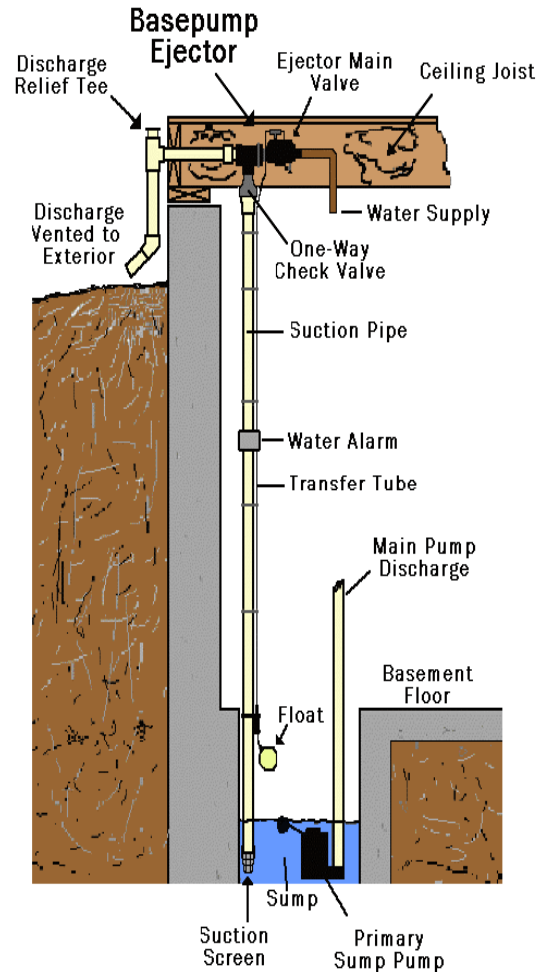

Basepump is reliable, affordable, and maintenance free.

**Rated 1,100 gallons an hour @ 50 PSI water supply
- 10 ft rise**

(18+ gal. per/min / higher the PSI the more gallons pumped)
Residential & Commercial unit / #HB-1000

**#RB-750 rated 900 gal. hr. or 15 gal. per/min.
@ 50 psi - 10 ft rise**

*Both units may need a thermal expansion tank (cost of unit w/inst.)
