*\* as of July 1, 2003 – most water heaters will have  
A new vapor ignition resistant technology*

Re: **Gas** Water Heaters

You may have noticed, and have been a bit confused by what you need or want in a new water heater. To end some of the confusion we suggest **comparing features**, not necessarily brand names. Each manufacturer has *good, better & best*. So a good way to base your decision is to look at your current water heater.....

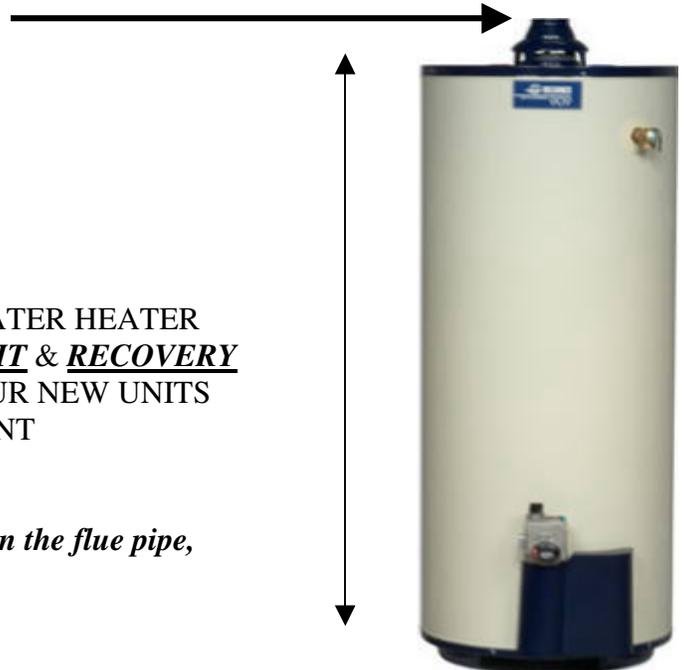

*...Does it have* (1) high recovery? (2) what's the gallon capacity? (3) Self-cleaning?  
(4) Tank leakage & parts warranty? (5) Tall or short model?

- (1) **RECOVERY** - is nothing more than the rate water will be heated in 1 hour. Look for rec.(ie. 33 rec) on your water heater label / rating plate or BTU input (ie. 35,000 btu) 33 gal. recovery is considered low recovery.
- (2) **GALLON CAPACITY** - water heaters come in various sizes – most often it will Be either a 30, 40, 50 or 75 gallon.
- (3) **SELF-CLEANING** - is a special feature that keeps the water in your heater moving, to aid/eliminate sediment build up.....no more having to drain water from your heater every three months or so.
- (4) **WARRANTY**- we carry 6 yr., 8 yr. & 12 yr. Tank leakage warranties, 2 yr., 6 yr. & 12 yr on parts, **Ed Young's Plumbing** has a **one year** labor guarantee on ALL new installations.
- (5) **SIZE**- water heaters come mostly in what's referred to as "TALL" or "SHORT" tall being in the 5 foot range (60") & short being in the 4 foot range (48").

**Draft Hood Height** = from the floor to the **top** of the draft hood..

Area pointed to on draft hood is where the stove pipe begins.

(The flue pipe **MUST** pitch upwards to chimney)

WHEN CALLING **ED YOUNG'S PLUMBING** FOR YOUR WATER HEATER NEEDS, TRY TO HAVE THE TANK **GALLON SIZE, HEIGHT & RECOVERY RATE** OF YOUR OLD HEATER SO WE CAN **COMPARE** OUR NEW UNITS FEATURE FOR FEATURE – THIS IS THE MOST IMPORTANT INFORMATION YOU CAN SUPPLY US WITH.

*Note: some specialty water heaters may have a blower motor on the flue pipe, this is known as a **POWER-VENTED UNIT**.*

**We also install TANK-LESS water heaters (no storage tank)**
